From: sefarlow@crl.com (Stephen E. Farlow)
Subject: Army MARS - Houston Area

I am looking for someone to talk to about getting involved with Army MARS
in the Houston, Texas area --- or Air Force MARS.
My phone number at work is 713 945-7579. A home phone will be given only
via e-mail to a legitimate responder. I would prefer, however, the name

and phone number of someone to talk to and get apps for this.
Please respond soon.

Subject: CANADIAN RED CROSS AMATEUR NET

The Canadian Red Cross Society (National Office) invites all
amateur stations affiliated with the Canadian Red Cross to participate
in The Canadian Red Cross Amateur Net.

The net will be conducted in the 20m band on 14.125 .
The net will be conducted every Sunday at 2pm Eastern time starting
on Nov 6 1994.

The net control station will be VA3CRC which is the amateur radio station
located at the Canadian Red Cross Headquarters in Ottawa.

for more information contact your local branch of the Canadian Red Cross,
or contact VA3CRC@VE3KYT via ax25 packet radio.

>Radio Service. If you want to be bigoted, I won't try to stop you. But,
>for everybody's sake, keep your ignorance and hatred to yourself.

This is a bunch of crap. Ignorance and hatred? Come on, you fool, its not
ignorance and hatred, its pure and simple disgust at the thought of someone

being perverted and the system allowing, no forcing others to accept that perversion as socially acceptable behavior. You faggots are doing something that goes against every conceivable law, whether it be moral, natural, biological, legal, or religious. I don't hate you, I don't hate anyone. Hate is what the gays have for those like me. But that doesn't mean that I have to tolerate your presence or like being forced to treat you and you sickening ilk as "normal" and "acceptable alternative".

"...beaten, ...or killed..." I agree that this is wrong and I would defend you if I were to witness this. I think it was Voltaire who said "I will fight to the death against what you say, but I will defend to the death your right to say it." "Hounded, harassed"? You got it. Being queer is not your right. You are adversely effecting me. You have caused my health insurance rates to skyrocket; you have caused the quality of health care to plummet due to the fact that you are spreading disease. You have begun the disintegration of the moral fabric of this country by disrupting the family and burdening society with yet another special interest group that has only hedonistic self interest at heart.

Lets face it - your whole motive for being what you are is to attract attention to yourself and to saturate yourself in a selfcentered social order that cares nothing but for its own motives and "feels-good" self interest.

I have nothing but pity and disgust for you and your kind. I view you and your kind as no different than any other sex-criminal such as child molesters, beasteality practitioners or rapists. You got a problem, and you wont admit it. Somehow, the incomprehensible winds of political correctness have blown your way. I hope that we can fix this situation and get you some help before its too late.

What does this have to do with Amatuer radio? Nothing, except unfortunately that I had hoped that there would be some organization such as the ARRL that would have the guts to stand up and say NO, we will not conform to PC and support homosexuality. I had hoped that there would be safe refuge from the sickening weirdness and hell-bent evil of homosexuality in the health and wholesomeness of the airwaves. But it is not to be. I suppose that things will have to decay further before the average man in the street says "Hey, I've had enough and this has got to stop!"

May God have pity on your troubled souls,

--

That may have been most of the problem. Some folks are likely to be turned off when they answer an 18-wpm CQ only to be asked to QRS to 10-13. Still, would have been nice if they had told you that rather than just terminating.

>

>You know, I *swore* that I wouldn't like CW, that it was anachronistic

>

Congrats! The same thing happened to me - dappled in CW to start since it was all I had available. Lost all interest in voice/digital pretty quick. :) Never had so much fun before. Working across North America on 5 watts and a low inverted-vee is great! Still want that beam though... :)

QRP is alot of fun, but it does take some thought towards strategy. A good one (for starting out) is to answer the calls of the loudest signals on the band. Calling CQ isn't the best strategy to start but don't be afraid to do it, particularly if the band is good.

Which leads to the key point - know your propagation conditions. Monitor WWV (5000, 10000, 15000 KHz) to check the bands. 14100 has a network of beacons, I believe.

Also, tune in around the QRP calling frequencies.

Try getting on the qrp mailing list. I believe you send email to listserv@netcom.com and put "subscribe qrp-l" in the message body.

Feel free to email if you want more info.

First just about any electronics store in Causeway Bay or in Kowloon will have ham Hts, sconners, and the like. There is also a good electronics area called Sham Shui Po. I have been to HK to by electronics and my friends have bought ham gear there. Go ahead and bargain with the dealers and make sure you get what you want.

>other hams?

One way broadcasts are prohibited except under certain restricted conditions. Your proposed use doesn't fall into that category. You *could* be in a two way contact with another amateur and talk *about* things you'd like to tell your brother-in-law. If he *happened* to be listening, he'd get the message. Now this is called a strawman transaction under the law, but it's unlikely the FCC would prosecute.

Sure, nothing wrong with that, but it seemed Mike was complaining
that the repeater users were preventing him from DXing. That sounds
like he intended to use the repeater frequency for simplex communications.

There is no rule as to what color the lights turn. Some communities
have set it up so that the lights in all direction turn red. This stops
all traffic and the emergency vehicles can drive on through without too
much fear of an idiot thinking he can beat the lights.

>What can be done? Has anyone else had (and solved) a similar problem.
>Please, no comments about calling the FCC, since they certainly would be

Good luck. I had some fierce QRM (nor QRN... N=natural, M=manmade)
a few months ago. I called the power company and made a point of NOT
mentioning the fact I was a ham. I told them it was interfering with
the TV (oh my GOD!!) and the AM bdcst band. The investigator was out
3 days later, and a week after that a crew came out and replaced
the lightning arrestor on the pole. They even gave me the bad arrestor.
At that time I told them I was a ham and described how bad the QRM
was on the amateur bands.

Three weeks later the problem resurfaced. I have called a few times
to complain but have not been given the time of day. I believe they
put amateur band QRM complaints on very low priority.

If you're getting interference on your tv set, you're in luck. Play
that up when you complain and don't mention you're an amateur radio
op!

When a friend of mine couldn't get help from the power company, he wrote a letter to the FCC outlining the problem and copied the CEO of the power company. I assume the FCC was too busy to act on the letter, but someone at the main office of the power company saw the copy of the letter and the power company fixed the problem. This was a large, regional power company, but a similar technique might work for a city power company.

Subject: Richard Clark N6UZS

This message is regarding my everlasting desire for N6UZS, Richard Clark's anus. We have many regular encounters. Since I have popped up, numerous others have popped up, such as WD4A, WD5000 & WD500 to name a few. This is to let you know, thanks to richard clark, homosexuality is alive & well in ham radio... on the 147.435 repeater in Los angeles, CA.

I urge all gay hams to contact richard clark if you are seeking anal pleasures.... Like me, enroute to 501 west brentwood in orange, ca at this time.

Those that dont know about the 147.435 repeater: It is mostly non-homosexual, except when richard clark & is wd40 buddies are out. The rest of the time it is jammed by KD6KEK in marina del rey, ca (frank richard). Other jammers who are closer to the machine, so they can do more damage, but who arent on the radio all day (usually) are KC6PQW ted sorensen the tird and this PUU guy. Thank god jeffery bregal KD6NBD is in jail (we hope). The 435 repeater in LA, CA certainly seems to attract the worst in ham radio.

To find out more about the anon service, send mail to help@anon.penet.fi. Due to the double-blind, any mail replies to this message will be anonymized, and an anonymous id will be allocated automatically. You have been warned. Please report any problems, inappropriate use etc. to admin@anon.penet.fi.

>Whatsgoinon?!

Most repeater controllers mask inputed Touchtones (tm). This is to provide a bit of security for control functions of the repeater that may be entered on the input frequency. That makes TT signaling schemes via repeater fail.

>THOSE NICE WEATHER RADAR MAPS? SOME ARE MICROWAVE BUT SOME ARE LASER DOPPLER!
>ALSO THE FAA IS LOOKING INTO BUILDING A WINDSHERE DETECTION DEVICE, it uses
>guess what LASER DOPPLER RADAR. Raytheon may be awarded this project.

Laser doppler radar **does** exist, and is being used by a few US police departments. (I've handled one of the units used by the Georgia State Patrol.) This is totally different from the old VASCAR time and distance equipment. However, local TV doppler weather radar is **not** laser, it's Ka band equipment manufactured by Harris. (I service this stuff.) The FAA windshear measuring radar is also **not** laser. It's UHF RF at 449.0 MHz (right in the amateur 70 cm band's repeater input segment, not pretty).

The laser speed measuring doppler radar unit I handled has a TV camera sensitive to the IR frequency used by the laser unit as an aiming device. You can clearly see the spot reflected off the car in the viewfinder. The unit is setup so the officer can videotape the bust. The speed reads out in characters keyed into the video picture. If you try to stealth the car, it's obvious in the camera viewfinder, and all the officer has to do is move the point of aim slightly, to a piece of chrome, the windshield, a headlight, a parking light reflector, etc until he sees the spot reflection, then he's got you.

The only way I can see to beat this system is an active IR jammer. It'd have to be really powerful too because even a functioning headlight, which pumps out lots of IR, won't blind the system.

I haven't beaten, hounded or harrassed anyone. I just don't see the
need to make such a big deal about *forcing* normal people to accept
your behavior and give you special privileges for something you choose
to do with your sex life. I don't see hetero monagamous men coming out
of the closet proclaiming, "I take my SO up the old dirt road once in a
while and I'm proud of it! You better accept that and give me what I
want or else!"

>By the way, while I don't have definitive numbers, I hear that about 10% of
